SOURCE Slovenski Porocevalec.REPORT MANUFACTURE OF NEW CHEMICAL PRODUCTS

The chemical factory in Hrastnik, Slovenia, which is under the direction of a certain Gresak, is now producing 150 grams of digitalis glucoside daily. The factory also produces other alkaloids from opium pitch. After several months of testing, the plant has produced a domestic black enamel, which is much cheaper than imported enamel, for the Dish factory in Celje.

The factories of the lumber combine in Belisce in Slavonia have begun to produce several important products. One of the newly erected factories has begun the production of Urotropine, an antiseptic preparation for internal use, which has been imported thus far. During its test production the factory manufactured 300 kilograms of Urotropine. All the blueprints for the factory installations were drawn up by Faust Lackovic.

The tannin factory in Belisce reports success in its test production of powdered blood albumen, which is used in the lumber industry for gluing ply wood. Other Yugoslav factories have tried to produce this glue, but have been unsuccessful.
